

To: President Donald Trump
Re: An Urgent Request from the Physicians of America

April 10, 2020

Dear Mr. President:

We, the undersigned physicians, urgently ask that you take two steps to help us treat patients according to our best ability and medical judgment, using the clinical and basic science data we already have on the effectiveness of certain established medicines in this war against COVID-19:

1. An Executive Order to remove the FDA Emergency Use Authorization restriction that states Hydroxychloroquine (HCQ) and Chloroquine (CQ), from the National Strategic Stockpile, are only approved "for certain *hospitalized* patients," and to direct the FDA, and other federal agencies, to support the option of early out-patient use of these medications, whether from the stockpile or otherwise.
2. An Executive Order to a) *prohibit* state governors from arbitrarily restricting HCQ and CQ to *only* hospitalized patients, and b) *prohibit* state medical boards and state pharmacy boards from threatening disciplinary action (now occurring in multiple states) against doctors and pharmacists *legally* prescribing and dispensing HCQ or CQ (or other FDA-approved medications) off-label for early treatment or prophylaxis for COVID-19 in out-patients or at-risk or exposed persons.

Restricting use to hospitalized patients means loss of the critical early window of opportunity to: (1) prevent the virus attaching to host cells, (2) reduce viral replication that prolongs time of infectivity and spread, (3) reduce the number of hospitalizations and need for intubation and mechanical ventilators, and (4) reduce risk of multi-organ damage and death or permanent lung impairment after recovery.

Evidence of successful treatment in thousands of patients is accumulating from many countries as well as U.S. physicians; it is far beyond "anecdotal."

HCQ has been FDA-approved for malaria since 1955, and it is now also approved for treating lupus and rheumatoid arthritis, with an impressive safety record.

When World Health Organization and U.S. academic experts say there is "no evidence that any medicine can prevent or cure" COVID-19, they correctly mean that *we don't yet have a randomized, placebo-controlled, double-blind clinical trial (RCT)*. But designing, setting up, conducting, and analyzing any RCT takes many months or years.

We can't wait months for a completed RCT or a vaccine. People are dying every day. Staggering numbers of people have lost jobs, incomes, and ability to live life normally, all of which lead to loss of life that could quickly exceed losses from the virus.

Physicians taking care of patients in our communities across the country must be free to use the available medicines free of politicians' and bureaucrats' second-guessing and threats. It is unprecedented—and lethal—for state governors and medical boards to forbid physicians' freedom to prescribe long-approved and safely used medications to save lives.

In a war to save lives and our country, we must fight with all the weapons we have at hand.

Sincerely, Elizabeth Lee Vliet, M.D. and 1304 additional signers.
